

PROFILE

Master's student in Data Science & Analytics at EPITA, Paris, seeking a 6-month end-of-studies internship starting January 2026 as a Data Analyst, Data Scientist, or AI/ML Engineer. I am skilled in machine learning, NLP, predictive modeling, and data-driven decision-making, with expertise in Python, SQL, and data visualization. Passionate about turning data into actionable insights and contributing to impactful, innovative projects in a dynamic organization.

EDUCATION

Master's in Data Science and Analytics (DSA) - EPITA : Ecole D'Ingénieurs En Informatique, Paris.	2023 - Present
Bachelor of Science in Computer Science - Ramakrishna Mission Vivekananda College, Chennai.	2018 - 2021

SKILLS

- Data Visualization: Power BI, Tableau
- Data Engineering / Pipelines: SQL, Pandas, Dataiku (familiar), ML-Flow
- Programming & ML: Python, Scikit-Learn, TensorFlow, NumPy
- Cloud: AWS
- Finance & Communication: Market risk concepts, client communication, workflow optimization
- Other: CI/CD (GitHub Actions), Data Handling.

PROJECTS

Paris Housing & Rent Insights Dashboard (Ongoing)

- Built an interactive dashboard in Power BI using Paris Airbnb dataset to analyse housing prices by arrondissement, availability, and room type.
- Designed SQL queries and Python preprocessing pipeline to clean and structure raw data.
- Implemented clustering model to group neighbourhoods by affordability, delivering actionable insights for housing decisions.

End-to-End Machine Learning & Data Pipeline with ML-flow

- Developed an automated pipeline for data ingestion, validation, transformation, and model tracking.
- Implemented regression models for wine quality prediction and monitored performance with ML-flow.
- Delivered structured reporting and visualizations to support data-driven decision-making.

Breast Cancer Risk Prediction Dashboard

- Applied machine learning models (k-NN, SVM, Random Forest) for clinical risk classification.
- Evaluated performance using standard metrics and presented results in a Power BI dashboard with predictive KPIs.
- Demonstrated use of data pipelines for medical analytics and real-time reporting.

Text-to-Music Generation using Latent Diffusion & VAE

- Built an AI pipeline to generate music from text prompts using mel-spectrograms, VAE, and DDIM architecture.
- Designed workflow for audio preprocessing, latent space encoding, and waveform synthesis with HiFi-GAN.
- Improved quality with FAD and SNR metrics, showcasing advanced ML and data processing skills.

WORK EXPERIENCE

Client Specialist	Access Healthcare — May 2023 – Sep 2023
• Managed client accounts, analyzed process KPIs, and ensured communication between business and operations • Ensured timely follow-up with insurance providers to resolve billing issues. • Strengthened analytical and reporting accuracy to support decision-making teams.	
AR Consultant	AGS Health — Aug 2022 – May 2023
• Managed accounts receivable processes for healthcare clients. • Analysed aging reports and worked denial claims to optimize cash flow. • Collaborated with cross-functional teams to address complex AR issues.	
Associate Customer Service (Amazon.ca) 2022	Sutherland Global Services — Jul 2021 – Aug 2022
• Provided support for Amazon.ca customers via chat and email. • Supported clients via chat and email, identifying patterns in operational issues to improve customer workflows. • Developed adaptability and communication skills under high-volume environments.
